Brandon, FL

Education

- B.A.S. in Software Development at St. Petersburg College Graduation: July 2027
 - GPA: 3.62 (President's Honor List for Summer 2026)

Experience

Full-Stack Software Engineer | Sandman Shop (Largo, FL) *Part-time: Mar 2026 – Sept 2026*

- Developed an e-commerce website using Angular, TypeScript, JavaScript, HTML, and CSS, in a GCP environment to migrate from third-party marketplaces and improve profit margins.
- Automated security testing by integrating Codex into CI/CD pipelines for REST API requests and multi-factor authentication, protecting user access and transaction data.
- Reduced page load times by 2 seconds after noticing slow performance, using Sharp, Node.js, Express.js, and MongoDB to compress and manage storage for faster browsing.

Software Engineer Intern | Revelation Gold Group (Remote) *Oct 2025 – Mar 2026*

- Created a custom portal using JavaScript, HTML, and CSS, that allowed our financial services platform to increase the number of subscribed users.
- Worked cross-functionally with agile teams throughout the software development lifecycle (SDLC), using Git and GitHub to plan code reviews, sprints, and iterative releases.
- Contributed to delivering features and market news through Amazon Web Services (AWS), PostgreSQL, and Vercel deployments, to always keep investors updated.

Projects

Monelytics | Personal finance app

- Launched a finance application using Angular, TypeScript, JavaScript, HTML, and CSS, that allowed users to see expenses and get notified before their monthly limits were reached.
- Implemented account security with Java, Spring Boot, and REST APIs to verify users and prevent unauthorized access.
- Built a system to store and organize data using PostgreSQL, Docker, and GitHub Copilot, so that users can receive accurate and personalized advice.

Skills

HTML, CSS, JavaScript, TypeScript, Angular, Java, Spring Boot, Node.js, Git, GitHub, Google Cloud Platform (GCP), Amazon Web Services (AWS), Docker, MongoDB, PostgreSQL, Codex, Copilot
